

# NASA has a unique view of Earth from space. Your view is unique, too.

Contribute to NASA's incredible library of Earth science data  
with the GLOBE Observer app.

## Clouds

Record the overall sky conditions, identify cloud types, and take photos in each direction to provide your perspective from the ground.

## Mosquito Habitat Mapper

Document potential mosquito habitats that are too small to see from space. With a few extra tools, you can also sample for larvae.

## Land Cover

Share photos and field notes about the landscape around you to provide more detailed observations of Earth's surface.

## Trees

Use your phone's built-in sensors to estimate tree heights, a critical component of understanding the role of trees in the carbon cycle.
